4
From your input, the greater number is 4
The total of the two input number is 7
atirah@atirah-VirtualBox:~$ vi HOT2
atirah@atirah-VirtualBox:~$ S
```

Question1

```
Activities Terminal Jun 4 02:48
atirah@atirah-VirtualBox: ~
#!/bin/bash
#Hot answer NUR ATIRAH HUSNA BINTI AZRUL AZAM CB22070
pass=SECRET
echo "Name:"
read name
echo "Password"
read password
if [ "$password" == "$pass" ]; then
    echo "How much do you have money?"
    read MONEY
    if [ $MONEY -lt 500000 ]; then
        echo "Welcome to this mansion , please come in and enjoy , dear Tan Sri $name"
    fi
else
    echo "Your password is incorrect . please re-enter your password."
fi
```

QUESTION 2

The screenshot shows a terminal window titled "atirah@atirah-VirtualBox: ~". The terminal displays a shell script that prompts the user for their name and two integers, then calculates the maximum of the two integers and their sum. The script is as follows:

```
#!/bin/bash
#HOT2 answer NUR ATIRAH HUSNA:
echo "What is your name?"
read name

echo "$name , please input two integer numbers"
echo "number 1:"
read num1
echo "number 2:"
read num2

if [ $num1 -gt $num2 ]; then
    largest=$num1
else
    largest=$num2
fi

echo "From ypur input, the greater number is $largest"

total=$(echo "$num2 + $num1" | bc)

echo " The total of the two input number is $total"
```

The terminal window includes a sidebar with icons for various applications: Firefox, Mail, Files, Music, and a help icon. The top bar shows "Activities", "Terminal", and the date "Jun 4 02:45".
